4 Marks

Primary Persona: School IT Helpdesk Agent. This empathy mapping analyzes the user's behaviors, mindsets, operational goals, and key challenges during everyday incident triage.

THINK & FEEL

- Need to process incoming incidents quickly to maintain SLAs.
- Want category assignments to be consistent and reliable.
- Frustrated by repeating identical classification steps for routine requests.
- Concerned about support delays during peak ticket arrival periods.

HEAR

- Students reporting Wi-Fi connectivity and login credential issues.
- Teachers reporting classroom projector and AV equipment failures.
- Users expecting rapid first-response times for common problems.
- Team leads asking for faster turnaround times and structured ticket routing.

SEE

- Inconsistent descriptions submitted across diverse incident requests.
- Recurring issues centered around network, password, and slow hardware.
- Every single incident needing manual opening, reading, and category picking.
- High volume of similar ticket requests clogging up the queue.

SAY & DO

- Read Short Description and Description text manually.
- Identify underlying technical issues based on keyword patterns.
- Manually select appropriate category dropdown values.
- Re-route or assign incidents manually to specialized fulfillment groups.

PAINS

- Manual ticket review consumes valuable support hours.
- High repetitive workload leads to operator fatigue.
- Human variability leads to inconsistent categorization.
- Delayed classification slows down downstream assignment.

GAINS

- Automatic incident classification upon ticket submission.
- Significant reduction in manual triage effort.
- Standardized, accurate category assignment.
- Instant ticket routing to appropriate teams.
- Low-code / no-code maintenance via ServiceNow Flow Designer.

Key Synthesis & Insight

The core user need is eliminating repetitive manual ticket categorization while ensuring uniform, consistent, and quick incident processing. Implementing keyword-driven logic inside **ServiceNow Flow Designer** resolves
