4 Marks

Data Flow Diagram (DFD Level-0)

Data Flow: Incident Details → Keyword Analysis → Classification → Routing

Agile User Stories & Acceptance Criteria

User Type	Epic	ID	User Story / Task	Acceptance Criteria	Pri.	Rel.
IT Helpdesk Agent	Incident Classification	USN-1	As an IT helpdesk agent, I can receive a newly created incident with its Short Description and Description available for processing.	A new incident is available in ServiceNow with required text fields.	High	S-1
IT Helpdesk Agent	Automatic Classification	USN-2	As an IT helpdesk agent, I can have an incident automatically classified based on predefined keywords.	A matching keyword condition assigns the intended category.	High	S-1
IT Helpdesk Agent	Automatic Classification	USN-3	As an IT helpdesk agent, I can have keywords from both Short Description and Description considered during classification.	The flow evaluates both text fields before assigning category.	High	S-1
IT Helpdesk Agent	Ticket Routing	USN-4	As an IT helpdesk agent, I can use the automatically assigned category to support appropriate ticket routing.	Incident contains updated category and routes to support group.	High	S-1
ServiceNow Admin	Rule Maintenance	USN-5	As a ServiceNow administrator, I can add or modify classification keywords and conditions in Flow Designer.	Updated rule is saved and applies to subsequent matching incidents.	High	S-1
ServiceNow	Rule	USN-6	As a ServiceNow administrator, I can	Classification	Med	S-
