

Auto Ticket Classification using Flow Designer

Technology Stack & Technical Architecture Specification

TEAM ID	DATE	PLATFORM	MAXIMUM MARKS
SWTID-2026-8437	01 October 2026	ServiceNow Cloud	4 Marks

Technical Architecture Diagram

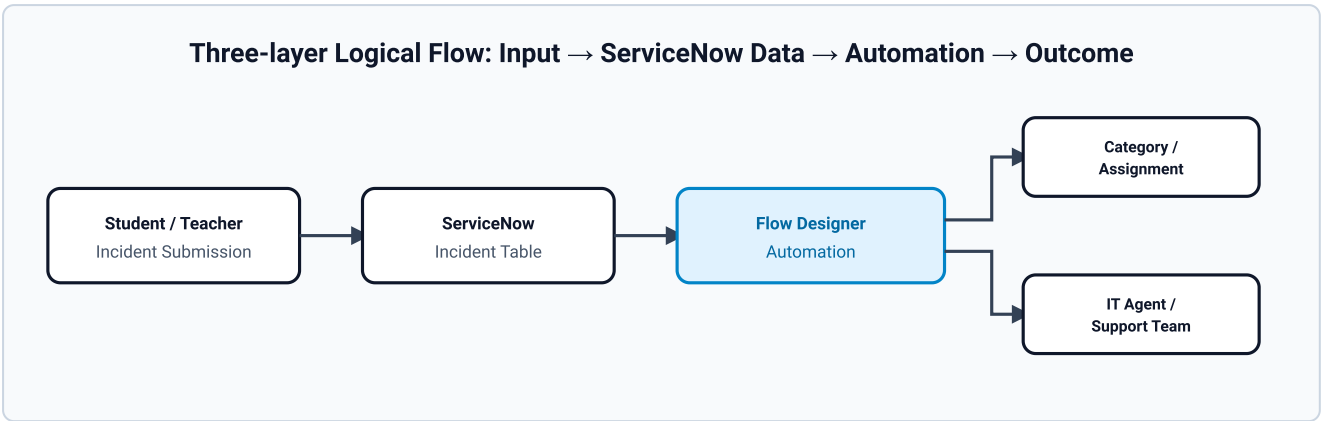

Table-1: Components & Technologies

S.No	Component	Description	Technology
1	User Interface	ServiceNow incident form used by students, teachers, or IT users to submit incident details.	ServiceNow Web UI
2	Application Logic-1	Flow trigger that starts execution automatically when a new incident record is created.	ServiceNow Flow Designer
3	Application Logic-2	Conditional logic that analyzes predefined keywords in Short Description and Description.	Flow Designer If-Then Conditions
4	Application Logic-3	Action component that updates the incident category field and supports support routing.	Flow Designer Actions
5	Database	Stores incident records including text fields, category, assignment group, and audit fields.	ServiceNow Incident Table
6	Cloud Database	Platform-managed cloud data store hosting all application and relational data.	ServiceNow Platform Database
7	File Storage	Not required for the core automated text classification workflow.	Not Applicable
8	External APIs	No external APIs required for this core no-code keyword-based solution.	Not Applicable
9	Machine Learning Model	Not used in the initial version; classification relies strictly on keyword-based rule sets.	Not Applicable
10	Infrastructure	The automated workflow executes entirely within the native	ServiceNow Platform
