

GENAI FUNCTIONAL & PERFORMANCE TESTING TEMPLATE

SWTID-2026-8437

Script-Controlled ACL — Restrict Record Access Based on Field Value

DATE	TEAM ID	PROJECT NAME	IMPLEMENTATION SCOPE
1.10.2026	SWTID-2026-8437	GenAI Functional & Performance Testing	Script-Controlled ACL (Branch Field)

Test Alignment Note: The standard testing framework defines functional scenarios (FT-01 to FT-04) and performance scenarios (PT-01 to PT-03). The test steps and conditions below are specifically adapted for the script-controlled Access Control List (ACL) business logic restricting access based on the Branch field.

1. TEST SCENARIOS & DETAILED EXECUTION MATRIX

ID	Scenario	Test Steps (How to test)	Expected Result	Actual Result	P/F
FT-01	Branch / User Input Validation	Prepare valid and invalid user/Branch combinations (EEE user, non-EEE user, Admin) and verify Branch field values on test records.	Valid test data is accepted and ACL receives expected user/record Branch values.	To be filled	☐
FT-02	Record Access Validation	Attempt to view records where Branch = EEE using an EEE user and a non-EEE user.	EEE user can view EEE record; non-EEE user is restricted/denied.	To be filled	☐
FT-03	Administrator Access Validation	Log in as an Administrator and attempt to view EEE and other-branch records.	Administrator retains full access across all branch records as required.	To be filled	☐
FT-04	ACL Configuration Check	Open ACL configuration in instance; verify target record operation, Branch script condition, and active state.	ACL is active, targets intended record operation, and applies required script logic.	To be filled	☐
PT-01	Authorization Response Time Test	Use browser timing / transaction logs while opening/querying a protected record as EEE and non-EEE users.	Access decision completes within target response time without latency degradation.	To be filled	☐
PT-02	Concurrent Access Test	Execute concurrent access queries using EEE, non-EEE, and Admin sessions within instance limits.	ACL consistently returns correct authorization decisions without slowdown or leaks.	To be filled	☐
PT-03	Record Volume / Access Load Test	Query multiple record lists containing mixed EEE and non-EEE values to verify batch visibility filtering.	Records are filtered smoothly, ACL remains consistent, and no performance crashes occur.	To be filled	☐

2. PROJECT-SPECIFIC ACCEPTANCE SCENARIOS

Access Scenario Rule	Expected Access	Actual Result	Status
EEE User → record where Branch = EEE	ALLOW	To be filled	☐
Non-EEE User → record where Branch = EEE	DENY	To be filled	☐
Administrator → record where Branch = EEE	ALLOW	To be filled	☐
Administrator → other-branch record	ALLOW	To be filled	☐

3. PERFORMANCE MEASUREMENT & BENCHMARK NOTES

Benchmark Calibration Note: Standard GenAI testing templates set default targets (e.g., < 3 seconds for generative LLM responses). Because this implementation evaluates server-side Access Control List (ACL) rule processing in ServiceNow rather than text generation APIs, evaluation metrics focus on authorization transaction times. Record the actual latency baseline agreed upon for the test environment before marking **PT-01** as Pass.

4. EVIDENCE / SCREENSHOT CHECKLIST

- ☐ **ACL Configuration:** Screenshot of active ACL rule, target operation, and underlying script.
- ☐ **EEE User Access:** Screenshot showing EEE user successfully viewing an EEE record.
- ☐ **Non-EEE User Restriction:** Screenshot showing non-EEE user blocked / restricted from viewing an EEE record.
- ☐ **Administrator Override:** Screenshot confirming Administrator viewing protected and non-EEE records.
- ☐ **Response Time Measurement:** System performance log or transaction timing evidence for PT-01.
- ☐ **Concurrent Access & Volume Load:** Load execution / list filter evidence for PT-02 and PT-03.

5. EXECUTION RESULT SUMMARY MATRIX

Test Category Metric	Value
Total Functional Test Cases (FT)	4
Total Performance Test Cases (PT)	3
Functional Tests Passed	To be filled
Functional Tests Failed	To be filled
Performance Tests Passed	To be filled
Performance Tests Failed	To be filled

OVERALL TEST EXECUTION STATUS

[Pass / Conditional Pass / Fail]

Status to be finalized upon completing test cases FT-01 to PT-03 and attaching required execution logs.
