

GENAI FUNCTIONAL & PERFORMANCE TESTING

SWTID-2026-8437

Execution Sheet — Auto Ticket Classification using Flow Design

TEAM / REFERENCE ID	SCOPE MECHANISM	TARGET CONDITION	TEST EXECUTION STATUS
SWTID-2026-8437	Script-Controlled ACL	Branch Field Restriction	In Progress / Active

Mandatory Execution Rule: Complete the *Actual Result* and mark *Status (Pass/Fail)* only after the corresponding functional or performance test scenario has been fully executed in the test environment.

1. FUNCTIONAL & PERFORMANCE EXECUTION MATRIX

ID	Test Scenario	Expected Result	Actual Result	Status
FT-01	Branch / User Input Validation	Expected values accepted properly across user input fields	To be filled upon execution	☐
FT-02	Record Access Validation	EEE users allowed access / Non-EEE users denied access	To be filled upon execution	☐
FT-03	Administrator Access	Full administrator access granted regardless of branch	To be filled upon execution	☐
FT-04	ACL Configuration	Scripted ACL active and enforced for targeted operations	To be filled upon execution	☐
PT-01	Authorization Response Time	Rule check completes within agreed SLA / latency target	To be filled upon execution	☐
PT-02	Concurrent Access	Consistent authorization decisions under parallel user load	To be filled upon execution	☐
PT-03	Record Volume / Load	Stable processing without authorization memory/time leaks	To be filled upon execution	☐

2. EXECUTION EVIDENCE REQUIREMENTS

- ☐ Input validation logs showing branch field parsing for FT-01
- ☐ Access restriction audit logs confirming ALLOW for EEE and DENY for Non-EEE for FT-02
- ☐ Admin override logs confirming unrestricted record access for FT-03
- ☐ ServiceNow / System ACL configuration properties screenshot for FT-04
- ☐ Latency metrics and system response log graphs for PT-01
- ☐ Load testing execution report under concurrent requests for PT-02 & PT-03

3. FINAL TEST EXECUTION SIGN-OFF

Overall Execution Summary: Fill in final status after all functional (FT) and performance (PT) test cases are completed.
