

DATE	TEAM ID	PROJECT NAME	MAXIMUM MARKS
1.10.2026	SWTID-2026-8437	Tableau	[Evaluation Pending]

Tableau Performance Alignment Note: The standard Tableau performance template evaluates six parameters: Data Rendered, Data Preprocessing, Utilization of Filters, Calculation Fields Used, Dashboard Design, and Story Design. This document maps these parameters directly to the script-controlled Access Control List (ACL) business logic, restricting record visibility based on user branch attributes.

1. TABLEAU PERFORMANCE TESTING PARAMETERS

S.No	Parameter	Values & Technical Description	Screenshot / Evidence
1	Data Rendered	Records render according to the script-controlled access rule. • <i>Authorized EEE User:</i> Records with Branch = EEE are displayed. • <i>Non-EEE User:</i> Restricted EEE records are hidden. • <i>Administrator:</i> Unrestricted view across all branch records.	[Insert Tableau Data View / Report Screenshot]
2	Data Preprocessing	Prepared dataset ensuring the Branch field is populated across test records. Includes records assigned to EEE and other branch categories alongside user session roles for access verification.	[Insert Data Prep / Source Data Screenshot]
3	Utilization of Filters	Uses the Branch field as the primary access-control filter. Ensures dynamic row-level filtering based on user session context (EEE vs. Non-EEE vs. Administrator).	[Insert Branch Filter / Filtered View Screenshot]
4	Calculation Fields Used	<i>ACL Rule Context:</i> No complex calculated field is required if user-branch mapping is evaluated directly by the security engine. If user-defined calculations (e.g., ISMEMBEROF () or USERNAME () rules) are implemented, list formulas here.	[Insert Calculated Field Screenshot, if used]
5	Dashboard Design	Visualizations / Graphs Count: [Enter Actual Count] Dashboard displays authorized visual elements for EEE users while presenting restricted views for unauthorized access attempts.	[Insert Final Tableau Dashboard Screenshot]
6	Story Design	Visualizations / Graphs Count: [Enter Count or N/A] If a Tableau Story is not utilized, mark this parameter as <i>Not Applicable (N/A)</i>.	[Insert Tableau Story Screenshot, if used]

2. PROJECT-SPECIFIC PERFORMANCE / ACCESS VALIDATION

Evaluation grid for Script-Controlled ACL performance under ticket reference **SWTID-2026-8437**:

Test Scenario	Expected Result	Actual Result	Status
EEE user views EEE record	Record is rendered / visible (ALLOW)	To be filled	☐
Non-EEE user views EEE record	Record is restricted / hidden (DENY)	To be filled	☐
Administrator views EEE record	Record is rendered / visible (ALLOW)	To be filled	☐
Administrator views other branch records	Full access retained (ALLOW)	To be filled	☐
Branch value is empty / unexpected	Follow defined secure access rule	To be filled	☐

3. EVIDENCE CHECKLIST

- ☐ Data rendered / authorized user view screenshot
- ☐ Data preprocessing or source-data preparation screenshot
- ☐ Branch filter / row-level security condition screenshot
- ☐ Calculation field formula screenshot (only if custom calculations are used)
- ☐ Final Tableau dashboard screenshot showing authorized vs. restricted views
- ☐ Tableau Story screenshot (only if a Story view is implemented)
- ☐ Access-denied or restricted-view evidence for non-EEE user sessions
- ☐ Administrator unrestricted access verification screenshot
